- About this App

Preface

This documentation contains information on how to install and operate **Beyond Fields** in your Business Central environment.

This documentation is intended for experienced users of Business Central. Additional knowledge of third-party software products may be required to set up **Beyond Fields**.

Read this documentation in full to set up **Beyond Fields** and work with it professionally. Pay particular attention to the tips, information and safety instructions contained in the documentation. Inform your employees about the proper use of **Beyond Fields** and keep the documentation in a place that is accessible to your employees.

General Information

This documentation contains important information that you must observe when following the descriptions. The information is highlighted as notes and arranged according to type and importance. The notes are listed below in ascending order of importance:

TIP

This represents **no risk**. In addition to the classic clicking on options, Business Central also offers the option of using so-called shortcuts. Shortcuts are key combinations with which you can also execute the desired action in the user interface. By using shortcuts, you can work faster and more effectively. Try the key combination and you will be surprised how much faster you can work.

NOTE

This represents **no risk**. This note contains important information on the correct use, configuration or operation of the software. Follow these instructions to avoid inefficiencies and unnecessary support tickets. For example, this note can show you that an option is hidden and tells you how to proceed if you want to show it again.

IMPORTANT

This represents a **low risk**. This notice refers to non-critical issues that may lead to undesired behavior or configuration problems. May affect user experience or functionality if not considered.

CAUTION

This represents a **medium risk**. This notice indicates a potential problem that could affect system stability or data integrity. Failure to comply may result in errors, loss of performance or partial service interruptions. The errors caused by non-compliance only affect the app itself and prevent you from working with data within the app.

WARNING

This represents a **high risk**. This notice indicates an immediate and serious risk to the productive system. Failure to observe this warning may affect the entire system. There is a risk of loss of critical data or total system failure, leading to prolonged downtime. It may not be possible to restore the data and a backup must be imported.

Beyond Fields is an extension for Microsoft Dynamics 365 Business Central.

Beyond Fields automatically adds additional fields for frequently used cards and lists. We extend more than 400 Microsoft Dynamics 365 Business Central Pages with the fields hidden in standard Business Central.

The following fields will be added to pages:

Name 2

To enter the company name, one field might not be sufficient. Accordingly, the name is continued in the **Name 2** field and often used as a reference. Through this extension, the information is displayed in all important pages/documents.

Description 2

The description of an item often does not fit into only one field. For this, **Description 2** is needed, but this standard field is not displayed everywhere. With the help of this extension, this problem belongs to the past.

Bin Code

If a company works with a warehouse management, the **Bin Code** field is an important part of a business day. Roles and special pages no longer need to be manually customized to add this information.

Overview of the extended pages

The following shows an overview of the standard pages which are extended with the above mentioned fields.

- Adjust Inventory
- Alternative Address Card
- Alternative Address List
- Asm.-to-Order Whse. Shpt. Line
- Assemble-to-Order Lines
- Assembly Availability
- Assembly Lines
- Assembly List
- Assembly Order
